

Urban and Rural Planning

Urban and rural planning are vital components in the dynamics of development in South Africa, and throughout the developing world. Strategic planning is crucial in managing increasing urbanisation, rural upliftment and the effective use of resources.

Spatial planning, from macro planning at national and regional levels, to micro planning at the urban design level, informs the type of infrastructure development needed. Assessing the economic, social and political landscape is critical in the engineering and spatial planning combination to ensure that urban planning is optimised to meet South Africa's developmental needs.

GIBB provides specialised consulting services in urban and rural planning. Our expertise in this sector ensures that project implementation is facilitated through cost-effective and practical land and development planning. GIBB delivers service excellence across the full sphere of development planning, ensuring timely implementation.

Our services include:

- Regional planning and development strategies
- Urban development frameworks and strategies
- Land development potential studies
- Urban renewal and redevelopment plans
- Rural development plans and strategies
- Urban growth management policies
- Township design and establishment
- Rezoning, sub-divisions and all planning legislation related issues/applications
- Urban growth and development research
- Special projects requiring spatial planning inputs, i.e. transport, environmental, engineering services development, etc.

The Urban and Rural Planning service can be provided at all GIBB offices in Southern Africa and Africa.

"Sustainable city building is key to the African Renaissance."

We change lives
